

JavaScript & React Interview Questions for Freshers

110+ Beginner-Friendly Questions to Crack Your First Frontend Interview

*55 JavaScript Questions | 55 React Questions
+ Top 20 Interviewer-Favourite Picks in Each*

Contents

1. Top 20 Most Important JavaScript Questions (Interviewer Favourites)
2. Top 20 Most Important React Questions (Interviewer Favourites)
3. JavaScript — Full List of 55 Questions
4. React — Full List of 55 Questions

Tip for Freshers: Master the ■ Top-20 sections first — these are the basic, fundamental questions interviewers ask most often at entry level. Then go through the full 55-question lists to build complete, confident preparation.

★ Top 20 JavaScript Questions

Must-know basics every fresher gets asked

- ★ What is the difference between var, let, and const?
- ★ What is a closure? Give a simple example.
- ★ What is hoisting in JavaScript?
- ★ What is the difference between == and ===?
- ★ What is the 'this' keyword, and how does it behave in different situations?
- ★ What is a Promise, and why is it used?
- ★ What is async/await, and how does it make async code easier?
- ★ What is the difference between synchronous and asynchronous code?
- ★ What is the Event Loop, explained simply?
- ★ What is event bubbling and event delegation?
- ★ What is the difference between null and undefined?
- ★ What is a higher-order function? Give an example.
- ★ Explain map(), filter(), and reduce() with simple examples.
- ★ What is the difference between shallow copy and deep copy?
- ★ What is destructuring, and how is it used with objects/arrays?
- ★ What is the spread operator vs the rest operator?
- ★ What is an arrow function, and how is it different from a normal function?
- ★ What are truthy and falsy values in JavaScript?
- ★ What is optional chaining (?.) and nullish coalescing (??)?
- ★ What is the difference between function declaration and function expression?

★ Top 20 React Questions

Must-know basics every fresher gets asked

- ★ What is React, and why do we use it over plain JavaScript?
- ★ What is JSX, and why can't browsers understand it directly?
- ★ What is the Virtual DOM, and how is it different from the Real DOM?
- ★ What are props, and how do you pass data between components?
- ★ What is state, and how is it different from props?
- ★ What is the useState hook? Give a simple example.
- ★ What is the useEffect hook, and what is the dependency array for?
- ★ Why do we need a unique 'key' prop when rendering lists?
- ★ What is the difference between controlled and uncontrolled components?
- ★ How do you handle events like onClick and form submission in React?
- ★ What is conditional rendering, and how do you implement it?
- ★ What is prop drilling, and how does the Context API help solve it?
- ★ What is the component lifecycle, in simple terms?
- ★ What is a custom hook? Can you give an example?
- ★ Why shouldn't you mutate state directly in React?
- ★ What are React Fragments, and why do we use them?
- ★ What is React Router used for?
- ★ What is the difference between functional and class components?
- ★ How do you fetch and display data from an API in React?
- ★ What is Redux (in simple words), and when would a fresher-level app need it?

JavaScript Interview Questions

Complete list — 55 fresher / entry-level JS questions

1. What is JavaScript? Where is it used?
2. What are the data types available in JavaScript?
3. What is the difference between var, let, and const?
4. What is the difference between primitive and reference (non-primitive) data types?
5. What is hoisting in JavaScript?
6. What is the difference between == and ===?
7. What is a closure? Give a simple example.
8. What is the 'this' keyword in JavaScript?
9. What is an arrow function? How is it different from a normal function?
10. What is the difference between null and undefined?
11. What are template literals? Give an example.
12. What is destructuring in JavaScript?
13. What is the spread operator and how is it used?
14. What is the rest operator and how is it different from spread?
15. What are array methods like map(), filter(), and forEach()? How do they differ?
16. What does the reduce() method do?
17. What is a callback function?
18. What is a Promise? Why is it used?
19. What is async/await and how does it simplify Promises?
20. What is the difference between synchronous and asynchronous code?
21. What is the Event Loop (in simple terms)?
22. What is the difference between setTimeout() and setInterval()?
23. What is event bubbling in JavaScript?
24. What is event delegation and why is it useful?
25. What is the DOM? How does JavaScript interact with it?
26. How do you select and manipulate DOM elements in JavaScript?

27. What is the difference between function declaration and function expression?
28. What is scope in JavaScript (global, local/function, block)?
29. What is the difference between let and var in terms of scope?
30. What is an IIFE (Immediately Invoked Function Expression)?
31. What is a higher-order function? Give an example.
32. What is the difference between forEach() and map()?
33. What are objects and arrays in JavaScript, and how are they different?
34. How do you clone/copy an object in JavaScript?
35. What is the difference between shallow copy and deep copy?
36. What are JavaScript modules (import/export)?
37. What is JSON? How do you convert an object to JSON and back?
38. What is NaN and how do you check for it?
39. What is type coercion in JavaScript?
40. What is the difference between undeclared and undefined variables?
41. What are truthy and falsy values in JavaScript?
42. What is optional chaining (?.) used for?
43. What is nullish coalescing (??) and how is it different from ||?
44. What is the difference between == null check and === undefined check?
45. What is an array, and what are some common array methods?
46. What is string interpolation in JavaScript?
47. What is the difference between a function and a method?
48. What is a ternary operator? Give an example.
49. What is local storage and session storage in the browser?
50. What is the difference between local storage and cookies?
51. What is strict mode ('use strict') and why is it used?
52. What is a for...of loop vs a for...in loop?
53. What is the difference between let, const, and reassigning object properties?
54. What are default parameters in functions?
55. What is the purpose of the 'export default' keyword?

56. What is debouncing (in simple terms, with a real-life example)?

React Interview Questions

Complete list — 55 fresher / entry-level React questions

1. What is React? Why do we use it?
2. What is JSX?
3. What is the Virtual DOM?
4. How is the Virtual DOM different from the Real DOM?
5. What is a component in React?
6. What is the difference between functional and class components?
7. What are props in React?
8. What is state in React?
9. What is the difference between props and state?
10. How do you pass data from a parent component to a child component?
11. How do you pass data from a child component back to a parent?
12. What are React Hooks?
13. What is the useState hook? Give a simple example.
14. What is the useEffect hook used for?
15. When does useEffect run, and what is the dependency array?
16. What is the useRef hook used for?
17. What is conditional rendering in React?
18. How do you render a list of items in React?
19. Why do we need a 'key' prop when rendering lists?
20. What happens if you don't provide a key or use an index as a key?
21. What are controlled components in React?
22. What are uncontrolled components in React?
23. How do you handle form inputs in React?
24. How do you handle events (like onClick) in React?
25. What is the component lifecycle (mounting, updating, unmounting) in simple terms?
26. What is the difference between class component lifecycle methods and useEffect?

27. What is prop drilling?
28. What is the Context API and why is it used?
29. What is the difference between Context API and Redux?
30. What is React Router used for?
31. How do you navigate between pages/routes in React?
32. What are fragments (or <>) and why use them?
33. What is the significance of returning a single parent element from a component?
34. What is CSS-in-JS or how do you style components in React?
35. What is the difference between inline styling and CSS modules in React?
36. What is component reusability, and why is it important?
37. What is a custom hook? Give a simple example.
38. What is the useContext hook used for?
39. What is the useMemo hook (in simple terms)?
40. What is the useCallback hook (in simple terms)?
41. What is the difference between useMemo and useCallback?
42. What is React.memo and why would you use it?
43. What are Error Boundaries in React?
44. What is lazy loading in React (React.lazy)?
45. What is the significance of the 'key' prop being unique and stable?
46. What is the difference between state update using setState and direct mutation?
47. Why should you not mutate state directly in React?
48. What is the difference between a single-page application (SPA) and a traditional website?
49. What tools do you use to create a React app (e.g., Vite, Create React App)?
50. What is npm/yarn and why is it used in React projects?
51. What is the difference between React and React Native (basic idea)?
52. What is Redux (in simple terms) and what problem does it solve?
53. What is the difference between local state and global state?
54. How do you fetch data from an API in a React component?
55. What is StrictMode in React?
